QA Engineer

Who is AMPLYFI?
AMPLYFI is an artificial intelligence and advanced data analytics company headquartered in the Welsh capital.

Our flagship platform, DataVoyant™, is a game-changer in the sphere of business intelligence, informing organisations of global market trends, technology advances and emerging business disrupters to maintain their competitive advantage. It is a deep learning powered bridge between data scientists and business intelligence teams.

We're based right in the heart of Cardiff in the Tramshed Tech – a funky co-working space for the creative and tech industry that's less than a five-minute walk from central station. We have the best of both worlds with our own large office space as well as access to the co-working space, giving us endless opportunity to network with other cutting-edge companies and attend events and meet-ups.

The AMPLYFI Team
We're all about team – its super important to us that everyone gets on and enjoys working with each other. We like each so much, we even spend some of our evenings and weekend hanging out. Whether that's going to the cinema, playing beach volleyball or just grabbing a cheeky beer or two. One of our co-founders has proudly built an office bar that is always stocked with a great selection of ales, beers, ciders and wine!

We're a pretty autonomous bunch, with a flat structure and a flexible approach to how we work. We encourage creativity and welcome people to share new ideas that can be implemented to make an impact. We're doing industry-shaking work so "out of the box" thinking is essential.

We don't have a dress code and we have a flexible approach to work hours so you can be yourself and perform at your best. You should know that we are big dog fans with a resident pooch, Milo. As acting "Head of Cuddles", he's always on hand to give you some affection and a boost when you need it.

Working as part of AMPLYFI's software development team
We're building a highly scalable, reliable platform to harvest the surface and deep web, extract features and content from those millions of documents, and push that content through our machine learning platform in near real-time to identify emerging technologies, the companies behind them and how that fits into a global landscape.

AMPLYFI has an exciting opportunity for a QA engineer. The tools and techniques for testing traditional software are increasingly well defined and understood. We're after someone to test and verify the entire product, with responsibility for version release. Machine Learning introduces many new challenges, from the construction of training sets to the validation of predictive analytics. We're looking for someone who wants continue to develop testing techniques of our code base and discover new testing techniques for our Machine Learning.

Who are you?
- Involved in the testing lifecycle of a distributed software platform
- You like to own the ongoing development of a testing strategy
- Curious in the emerging complexity of machine learning and predictive analytics
- Testing that impacts all parts of the product development lifecycle
- Experience testing in a cloud based environment

If you would like to hear more on why AMPLYFI is an awesome place to work, please email your CV to chloe.murray@amplyfigroup.com explaining the position you are applying to and why.
